Agent Metrics Review Checklist

Pashun Sports T-Shirts · Microsoft Copilot Studio: The Complete Guide (2026) · Lecture 13

A one-page checklist for each review of the Monitor tab.

☐ Date range set (last 28 days, or the longest period with real data)

☐ Agent is at least 24 hours past publishing, so data has populated

☐ Recorded: total sessions, engagement, resolution, escalation and abandon rates (with today's date)

☐ Compared with the previous review: direction of travel, not the absolute number

☐ Sorted topics by escalation rate and by abandon rate; worst topic identified

☐ Read three transcripts from the worst topic; root cause written in one sentence (design friction, missing knowledge or wrong trigger phrases)

☐ Opened the unmatched utterances list; top five recorded verbatim

☐ Each improvement written as a specific request with a testable success check

☐ Items scored Volume x Pain / Effort and ranked

☐ Changes tested with real utterances from the transcripts

☐ Regression test run on existing topics

☐ One-page stakeholder report updated (sessions, resolution, hours deflected, top three improvements)
